¹ We have worked closely with our partners and our Independent Advisory Group, to align on three initial criteria that are intended to support the certifications industry globally on its journey towards regulatory compliance, and drive consistency in the minimum threshold that entities meet.

The criteria represent the first step in an ongoing effort to increase transparency globally, and we expect the criteria to become more robust with each iteration, in line with the evolving legislative landscape.

1. Third-party audit that includes on-site and/or remote online assessment of sustainable practices reported by the property.
2. Publicly available standards upon which the certification or scheme is based.
3. Focuses on evaluating the impact of social and/or economic, and/or environmental factors, among others, as encompassed within, but not restricted, to the United Nations 17 Sustainable Development Goals.

This is a long-term initiative intended to support the certifications industry on its journey towards regulatory compliance, and drive consistency in the minimum threshold entities meet on a global scale. As such we will continue to work with our stakeholders to closely monitor changing legislation and adapt our approach accordingly.

As our criteria evolve, we will iteratively review all certifications, standards and schemes that are compliant with our initial criteria, against the updated criteria. This is so that we can continue to support the certifications industry on its journey towards regulatory compliance, and raise the minimum threshold these entities meet over time.
